This chapter lays the groundwork for the entire course. Understanding real numbers, their properties (commutative, associative, distributive), and operations (addition, subtraction, multiplication, division) is

crucial. The solutions provided in this section cover topics such as:

Classifying Real Numbers: Identifying rational, irrational, integers, whole numbers, and natural numbers.

Order of Operations (PEMDAS/BODMAS): Solving expressions using the correct order of operations.

Properties of Real Numbers: Applying commutative, associative, and distributive properties to simplify expressions.

Absolute Value: Understanding and evaluating absolute value expressions.

Operations with Real Numbers: Performing addition, subtraction, multiplication, and division with real numbers, including operations involving fractions and decimals.

Chapter 2: Solving Equations and Inequalities – Mastering Algebraic Manipulation

This chapter introduces the core skill of solving equations and inequalities. The solutions provided will guide students through various techniques, including:

Solving Linear Equations: Using inverse operations to isolate the variable and solve for x .

Solving Multi-Step Equations: Applying multiple operations to solve equations with more complex expressions.

Solving Equations with Variables on Both Sides: Isolating the variable when it appears on both sides of the equation.

Solving Inequalities: Solving inequalities and representing the solution set on a number line and using interval notation.

Solving Compound Inequalities: Solving inequalities involving "and" and "or" conditions.

Solving Absolute Value Equations and Inequalities: Solving equations and inequalities involving absolute value.

Chapter 3: Graphing Linear Equations and Inequalities – Visualizing Algebraic Relationships

This chapter focuses on the graphical representation of linear equations and inequalities. Solutions will cover:

Graphing Linear Equations: Plotting points and drawing lines from equations in slope-intercept, point-slope, and standard forms.

Finding Slope and Intercepts: Calculating slope, x-intercept, and y-intercept from equations and graphs.

Writing Equations of Lines: Writing equations of lines given different information (slope and y-intercept, two points, etc.).

Graphing Linear Inequalities: Shading the regions that satisfy linear inequalities.

Graphing Systems of Equations and Inequalities: Solving systems of equations graphically and identifying solutions.

Chapter 4: Linear Functions – Understanding Functional Relationships

This chapter introduces the concept of linear functions. Solutions will help students understand:

Identifying Linear Functions: Determining whether a relationship is a linear function.

Function Notation: Using function notation ($f(x)$) to represent functions.

Domain and Range: Identifying the domain and range of a function.

Analyzing Linear Functions: Interpreting the slope and y-intercept in the context of real-world problems.
